Microsoft has a majority market share in the new desktop PC marketplace. This is a bug, which Ubuntu is designed to fix.

Open Source Private Branch Exchange (PBX)

Asterisk is an Open Source PBX and telephony toolkit. It is, in a sense, middleware between Internet and telephony channels on the bottom, and Internet and telephony applications at the top.

Asterisk can be used with Voice over IP (SIP, H.323, IAX) standards, or the Public Switched Telephone Network (PSTN) through Supported Hardware.

Supported hardware:

- * All Wildcard (tm) products from Digium (<http://www.digium.com>)
- * QuickNet Internet PhoneJack and LineJack (<http://www.quicknet.net>)
- * Full Duplex Sound Card supported by Linux
- * ISDN4Linux compatible ISDN card
- * Tormenta T1/E1 card (<http://www.bsdtelphony.com.mx>)
- * Xorcom Astribank USB telephony adapter (<http://www.xorcom.com>)
- * CAPI compatible ISDN cards can be run using the add-on package chan-capi

Ubuntu also enjoys a rich and active forum where most any question can be answered by a worldwide community of users.

Dear Ubuntu,

I'm looking for a good Asterisk engineer, can you help?

**Sincerely,
A Small Biz User**

Dear Small Biz User,

Of course we can, we're Ubuntu. Did you think we'd leave you fend for yourself? What are we, Windows?

**Sincerely,
Ubuntu**
